### SAFETY INSTRUCTIONS

**WARNING:** To reduce the risk of serious injury, read the following Safety Instructions before using the **INSTRIDE**.

1. Shocks on steppers get **HOT** during use. To avoid burns, do not touch the shocks until they have time to cool.
2. Make sure that all nuts, bolts, screws, and knobs are tight prior to each use.
3. Always make sure that the Cable(9) is properly seated in the groove on the Pulley(8) before using the **INSTRIDE**.
4. Use the **INSTRIDE** only on a level surface.
5. Wear appropriate clothing when exercising; do not wear loose clothing that could become caught in the **INSTRIDE**.
6. Keep small children and pets away from the **INSTRIDE** at all times including while using or assembling the **INSTRIDE**.
7. The **INSTRIDE** should not be used by persons weighing more than 250 lbs.
8. The **INSTRIDE** should be used by only one person at a time.
9. Be careful to maintain your balance while using, mounting, dismounting, or assembling the **INSTRIDE**, loss of balance may result in a fall and serious bodily injury.
10. Use the **INSTRIDE** only as described in the manual.

**WARNING:** Before starting any exercise or conditioning program you should consult with your personal physician to see if you require a complete physical exam. This is especially important if you are over the age of 35, have never exercised before, are pregnant, or suffer from any illness. **READ AND FOLLOW THE SAFETY INSTRUCTIONS. FAILURE TO FOLLOW THESE INSTRUCTIONS CAN RESULT IN SERIOUS BODILY INJURY.**

## USING THE ELECTRONIC METER

**POWER ON** : Pedal movement or push any button.

**POWER OFF** : Automatic shut off after 5 minutes of inactivity.

### FUNCTION BUTTONS:

**ST/STOP** : Push to start or stop the functions.

**RESET** : To reset all functions to zero.

### FUNCTION:

**TIMER**: Displays the time, from 1 sec up to 99:59 minutes.

**COUNTER**: Displays the total step count, from zero to 9999 steps.

**NOTE**: 1. The meter will stop counting time automatically after 4 seconds of inactivity. All function values will be kept. Restart the meter by moving the pedals.

2. The electronic meter uses two "AA" or "UM-3" batteries.

## CONDITIONING GUIDELINES

How you begin your exercise program depends on your physical condition. If you have been inactive for several years, or are severely overweight, you must start slowly and increase your time on the **INSTRIDE** gradually: a few minutes per workout.

Initially, you may be able to exercise only for a few minutes in your target zone, however, your aerobic fitness will improve over the next six to eight weeks. Don't be discouraged if it takes longer. It's important to work at your own pace. Ultimately, you'll be able to exercise continuously for 30 minutes. The better your aerobic fitness, the harder you will have to work to stay in your target zone. Please remember these essentials:

- Have your doctor review your training and diet programs to advise you of a workout routine you should adopt.
- Begin your training program slowly with realistic goals that have been set by you and your doctor.
- Monitor your pulse frequently. Establish your target heart rate base on your age and condition.
- Set up your **INSTRIDE** on a flat, even surface at least 3 feet from walls and furniture.

## EXERCISE INTENSITY

To maximize the benefits of exercising, it is important to exercise with the proper intensity. The proper intensity level can be found by using your heart rate as a guide. For effective aerobic exercise, your heart rate should be maintained at a level between 70% and 85% of your maximum heart rate as you exercise. This is known as your target zone. You can find your target zone in the table below. Target zones are listed for both unconditioned and conditioned persons according to age.

AGE	UNCONDITIONED TARGET ZONE (BEATS/MIN.)	CONDITIONED TARGET ZONE (BEATS/MIN.)
20	138~167	133~162
25	136~166	132~160
30	135~164	130~158
35	134~162	129~156
40	132~161	127~155
45	131~159	125~153
50	129~156	124~150
55	127~155	122~149
60	126~153	121~147
65	125~151	119~145
70	123~150	118~144
75	122~147	117~142
80	120~146	115~140
85	118~144	114~139

During the first few months of your exercise program, keep your heart rate near the low end of your target zone as you exercise. After a few months, your heart rate can be increased gradually until it is near the middle of your target zone as you exercise.

To measure your heart rate, stop exercising but continue moving your legs or walking around and place two fingers on your wrist. Take a six-second heartbeat count and multiply the results by 10 to find your heart rate. For example, if your six-second heartbeat count is 14, your heart rate is 140 beats per minute. (A six-second count is used because your heart rate will drop rapidly when you stop exercising.) Adjust the intensity of your exercise until your heart rate is at the proper level.

## WARM-UP and COOL-DOWN

**Warm-up** The purpose of warming up is to prepare your body for exercise and to minimize injuries. Warm up for two to five minutes before strength-training or aerobic exercising. Perform activities that raise your heart rate and warm the working muscles. Activities may include brisk walking, jogging, jumping jacks, jump rope, and running in place

**Stretching** Stretching while your muscles are warm after a proper warm-up and again after your strength or aerobic training session is very important. Muscles stretch more easily at these times because of their elevated temperature, which greatly reduces the risk of injury. Stretches should be held for 15 to 30 seconds. Do not bounce.

### Suggested Stretching Exercises

#### Lower Body Stretch

Place feet shoulder-width apart and lean forward. Keep this position for 30 seconds using the body as a natural weight to stretch the backs of the legs. **DO NOT BOUNCE!**

When the pull on the back of the legs lessens, try a lower position gradually.

#### Floor Stretch

While sitting on the floor, open the legs as wide as possible. Stretch the upper body toward the knee on the right leg by using your arms to pull your chest to your thighs. Hold this stretch 10 to 30 seconds. **DO NOT BOUNCE!** Do this stretch 10 times. Repeat the stretch with the left leg.

#### Bent Torso Pulls

While sitting on the floor, have legs apart one leg straight and one knee bent. Pull the chest down to touch the thigh on the leg that is bent and twist at the waist. Hold this position at least 10 seconds. Repeat 10 times on each side.

#### Bent Over Leg Stretch

Stand with feet shoulder-width apart and lean forward as illustrated. Using the arms, gently pull the upper body towards the right leg. Let the head hang down. **DO NOT BOUNCE!** Hold the position a minimum of 10 seconds. Repeat pulling the upper body to the left leg. Do this stretch several times slowly.

**Remember always to check with your physician before starting any exercise program.**

**Cool-Down** The purpose of cooling down is to return the body to its normal, or near normal, resting state at the end of each exercise session. A proper cool-down slowly lowers your heart rate and allows blood to return to the heart. Your cool-down should include the stretches listed above and should be completed after each strength-training session.
